# 1 Introduction

## 2 Example document

This section serves as example to demonstrate appearance of the template. And give information on the way it works.

### 2.1 File and folder hierarchy

This template has a preset folder and file hierarchy to have a clear structure. If you know what you're doing, you can play around with it but it works well as is.

#### 2.1.1 Chapters and section and appendices

It is recommended to place all your sections as separate `.tex` files and store them in the `chap` folder. It is referenced in the main document with `\input{chap/example}`.

Appendices work on the same principle and can be stored in the `appendices` folder.

#### 2.1.2 Figures

Figures are stored in the `fig` folder and  $\text{\LaTeX}$  will automatically look for the image file there so you should reference it from this folder. A special function was implemented to allow the insertion of a single figure with a single line of code and have the filename, the label, the legend and the width defined.

```
\figi{cleanspace-one}{fig:cleanspace-one}{Image of CleanSpace One}{0.4\textwidth}
```

Figure 2.1: Image of CleanSpace One

## 2.2 Bibliography

The system has been simplified and uses BibTeX as a compiler. All documents are in `refdoc.bib`.

### **3 Conclusion**

YOUR NAME  
Lausanne, 06/01/2016
